

C.M.R LTD INFORMATION SHEET

C.M.R Ltd have recently taken delivery of the latest accelerometer calibration system available from The Modal Shop. This will enable us to do more calibrations in a day, further reducing our already incredible turnaround times!

There will also be some subtle changes to the layout of the Calibration Certificate, which includes an additional Phase graph on our Iso 9001 Certificates as well as phase and deviation on our UKAS certificates. As the new system uses a higher accuracy Reference Grade Accelerometer and improved software, the overall accuracy of the calibration will be improved. The system also allows us to go down to 2Hz on one shaker, removing the need for two figures at 20Hz where our old system used to change from one shaker to the other. Calibrations below 2Hz will be carried out on our low frequency rig and we hope to expand our UKAS Accreditation to include 0.5Hz and expand our top limit to 15kHz.

One thing that will remain the same is the price for the accelerometer calibrations, so quicker, more accurate and more detailed calibrations will cost the same as before.

For details on all the other high quality calibration services carried out by C.M.R Ltd, please visit our web-site at www.cmr-vib.co.uk or call 01603 279557, for a fast, friendly and efficient, calibration service.
