PCB Piezotronics Releases New Catalogue “Industrial Vibration Sensors, Switches and Instrumentation”

PCB Piezotronics Ltd has announced the release of a new 124-page full product catalogue, “Industrial Vibration Sensors, Switches and Instrumentation”, detailing a full line of high-temperature, high frequency, low-cost, ICP® Shear Mode and 4-20 mA accelerometers, switches, indicators/alarms and signal conditioning equipment for machine condition monitoring, predictive maintenance, route based measurements, permanent installations, and affordable 24/7 online monitoring. Included is a comprehensive selection of electronic and mechanical vibration switches for alarm and shutdown protection of critical machinery, including the patented Bearing Fault Detector; two-wire Smart Vibration Switch, featuring Magnetically Adjustable Vibration Threshold (MAVT™) technology; and the patented Reciprocating Machinery Protector, for effective shock monitoring of reciprocating compressors and other critical machinery.
